

## BIOSAFE® Antimicrobial Receives EPA Label Approval

Rev. 022008

Pittsburgh, PA. – July 1, 2007 – BIOSAFE Inc, has announced that its product, BIOSAFE® Antimicrobial (HM 4100) has received label approval from the US Environmental Protection Agency (EPA).

A unique and effective antimicrobial technology, provided to the market in a polymeric resin form, is approved for uses in a variety of substrates, including textiles, plastics, medical goods, construction and building products, and consumer products. The BIOSAFE antimicrobial polymer safely and permanently protects surfaces from the harmful and degrading effects of bacteria, mold, mildew, and fungi.

BIOSAFE Antimicrobial is easily incorporated and protects substrates of all types, by creating an invisible covalent bond between antimicrobial and product. Through the cross linking technology, these antimicrobial properties can impart many performance-enhancing characteristics without changing the dimensions or physical properties of the modified surfaces.
